AUTOPSY REPORT

CASE 73 - 3409

August 15, 1973 ·

PATHOLOGICAL DIAGNOSIS ON THE BODY

OF

Frank Anthony Aguirre 932 West Cottage Street Houston, Texas

Asphyxia due to strangulation and gagging.

OPINION

It is our opinion that the decedent, Frank Anthony Aguirre, came to his death as a result of asphyxia due to strangulation and gagging, homicide.

It is our further opinion that death occurred on or about February 24, 1972.

COMMENT: Dr. Joseph A. Jachimczyk spoke with Mr. Frank Aguirre on the telephone on August 23, 1973.

Chief Medical Examiner

POSTMORTEM EXAMINATION ON THE BODY OF

Frank Anthony Aguirre
932 West Cottage Street
Houston, Texas

HISTORY: These remains were recovered from a grave 2 to 3 feet deep on the beach off Highway 87, 1 mile west of Jefferson County line, in Chambers County, Texas, at 10:13 a.m. on August 13, 1973. Unknown #23 (73-3408) and Unknown #24 (73-3409) were brought to the Harris County Morgue at approximately 4:00 p.m. on August 13, 1973. (See Companion Cases 73-3365, 73-3366, 73-3412 and 73-3413).

AUTOPSY: The autopsy was performed by Chief Medical Examiner Joseph A. Jachimczyk, M.D., assisted by Assistant Medical Examiners Ethel E. Erickson, M.D., and G. Sheldon Green, M.D., and assisted by Dr. Paul G. Stimson, beginning at 1:15 p.m. on August 15, 1973, in the Harris County Morgue.

Received in a black crash bag were the skeletal remains of a male Caucasian with only a small amount of decomposed flesh and skin. The skull was covered with long black hair, measuring from 8 to 10 inches in length. There was adhesive tape covering the entire face. Frere was a gag present in the mouth. Around the neck area, there was a rope tied in a hangman's noose. There was a portion of plastic covering received with the body. The bones included a complete skull with the teeth, two femurs, two radii, two tibias, two fibulas, two humeri, two ulnas, one scapula, two pelvic bones, 21 ribs, two clavicles, manubrium, and the body of the sternum. In 10 of the ribs, there were irregular protrusions near the vertebral edges for muscle attachment at the anterior ends of the ribs. There were three large bones of a foot and six small bones of the hand, including metatarsals and metacarpals. Each femur measured 18-1/2 inches in length. Each tibia measured 16 inches in length. Each humerus measured 12-1/2 inches in length. Each fibula measured 16 inches in length. ulna measured 10-1/4 inches in length. Each radius measured 10-3/4 inches. Each clavicle was 5-3/4 inches in length.

The skeletal features are consistent with those of an 18 year old Caucasian male with a living stature of 6 feet 2 inches.

DENTAL EXAMINATION

Universal Charting System: The four third molars are not present. There is a cingulum caries on the upper left lateral, which is tooth 10. There is a mesial and distal pit amalgam on tooth 14, which is the upper left first molar. There is an occlusal amalgam in the lower right first molar, tooth 30. There is an occlusal amalgam in the lower right second molar, which is tooth 31. The upper right second bicuspid, tooth 4, is in cross-bite to the lingual. The jaw relationships are normal.

Comparison of our record with the record of Dr. Bernard M. Solomon, D.D.S., 1717 North Loop West, Suite #3, Houston, Texas, 77008. Fillings were present in three teeth which were reversed from those we had charted. However, on August 31, 1973, at 2:30 p.m., I called Dr. Solomon and asked him what charting system he used. He charted #3 as the upper left first molar. He charted #30 as the lower right first molar. He charted #31 as the lower right second molar. This was different from the manner we charted. Our upper left first molar would be #14, the lower right first molar would be #30 and the lower right second molar #31. Therefore, the fillings in the charts were exactly the same; only the method of charting differed. Dr. Solomon had no antemortem radiographs. Accordingly, it is our opinion, based upon a reasonable medical probability, that the decedent is Frank Aguirre.

Paul G. Stimson, D.D.S., M.S.
